

JobKit - Tosca / SAP automation interview questions

107 questions for Tosca / SAP automation. Single-file download.

1. What is Tosca?

Tricentis Tosca: model-based test automation, largely scriptless.

2. What is model-based testing in Tosca?

You scan the app into modules and reuse them in test cases.

3. What is Tosca Commander?

The main UI to design, run, and manage tests.

4. What is a workspace?

A Tosca repository you open in Commander.

5. Multi-user vs single-user repo?

Multi-user uses a DB for check-in; single-user is file-based.

6. What is a module?

A reusable model of UI or API controls.

7. What is XScan?

Scanner that identifies controls and builds modules.

8. What is TBox?

Tosca's engine layer for steering applications.

9. What is a test case?

A sequence of test steps using modules.

10. What is a test step value?

The action and data on a module attribute.

11. What is ActionMode?

Input, Output, Verify, Buffer, WaitOn, Select, Constraint, Insert, etc.

12. What is Buffer?

Save a runtime value to reuse later.

13. What is Verify?

Assert that a control equals an expected value.

14. What is WaitOn?

Wait until a control reaches a value or exists.

15. What is Constraint?

Limit which row or item is used.

16. What is a TestCaseDesign sheet?

Data-driven instances from a template.

17. What is an instance?

One data combination generated from TCD.

18. What is a template test case?

A test case that instantiates from TCD.

19. What is a business parameter?

A named value passed into a test case.

20. What is a library in Tosca?

Reusable test step folders.

JobKit - Tosca / SAP automation interview questions

21. What is a TestStepFolder?

A grouping of steps, sometimes used as a reusable block.

22. What is a recovery scenario?

Cleanup or retry after a failed step.

23. What is a cleanup folder?

Steps that run after a test to leave the app stable.

24. What is an execution list?

A set of test cases to run in order.

25. What is ScratchBook?

Ad-hoc run without saving results to an execution list.

26. What is TC-Shell?

Command-line Tosca for CI.

27. What is DEX?

Distributed Execution: run tests on agent machines.

28. What is a DEX agent?

A machine that executes tests from a queue.

29. What is Tosca Server?

Services for DEX, dashboards, and integrations.

30. What is AOS?

Automation Object Service, depending on the Tosca version.

31. What is TDS?

Test Data Service: managed test data.

32. What is Test Data Management?

Create, mask, and provision data for tests.

33. How do you scan a web page?

XScan with the browser extension or engine, then map controls.

34. What is a steering engine?

The adapter for HTML, SAP, API, and others.

35. What is the HTML engine?

Steers browser DOM controls.

36. What is the SAP engine?

Steers SAP GUI controls.

37. What is API Scan?

Build modules from REST/SOAP definitions.

38. How do you test REST in Tosca?

API Scan or API Engine modules with payload and verify.

39. What is a payload?

JSON or XML body you send.

40. How do you verify status 200?

Verify the status attribute on the API module.

41. How do you chain API calls?

Buffer an id from the first response into the second request.

42. What is a module attribute?

JobKit - Tosca / SAP automation interview questions

One field or control in a module.

43. What is a technical ID?

How Tosca finds the control, for example id or xpath-like path.

44. What if XScan cannot find a control?

Try another engine, frame, or identify by parent.

45. What is a dynamic ID problem?

IDs change each session; use a stable property.

46. How do you handle iFrames?

Scan inside the frame or switch context per engine rules.

47. How do you handle a dropdown?

Input or Select action on the combo control.

48. How do you handle a table?

Constraint on a row plus Input/Verify on cells.

49. How do you upload a file?

File control Input with a path the agent can see.

50. How do you handle CAPTCHA?

You do not automate CAPTCHA; tests skip or use a test hook.

51. How do you handle SSO?

Test account plus storage of a session if the project allows.

52. What is a business-focused test case?

Steps named in business language, modules underneath.

53. What is risk-based testing in Tosca?

Weight tests by business risk if the project uses it.

54. What is exploratory testing vs Tosca?

Exploratory is unscripted; Tosca is designed automation.

55. What is a requirements folder?

Optional mapping of tests to requirements.

56. What is coverage in Tosca?

Which requirements or TCD instances ran.

57. How do you run from CI?

TC-Shell or Tosca CI against a workspace and execution list.

58. How do you pass results to Jenkins?

CI result files or Tosca Server reporting.

59. What is a configuration parameter?

Settings such as browser, timeout, or test config.

60. What is TCP?

Test configuration parameter.

61. How do you run Chrome vs Edge?

TCP or test configuration for the browser.

62. What is a buffer syntax?

Curly braces with the buffer name, depending on version.

63. What is a date expression in Tosca?

Dynamic date functions in test step values.

JobKit - Tosca / SAP automation interview questions

64. What is a random value?

Generated test data; do not use it for unique keys without control.

65. How do you wait for a spinner?

WaitOn existence or wait for the spinner to vanish.

66. Why not use a huge static wait?

It slows suites and still flakes; WaitOn is better.

67. What is synchronization?

Waiting for the app to be ready before the next step.

68. What is a flaky test?

Passes and fails without product bugs; fix waits and identifications.

69. How do you stabilize SAP tests?

SAP engine, proper GUI scripting, and wait for busy indicators.

70. What is SAP scripting setting?

SAP GUI must allow scripting on the client and server.

71. What is a TCode?

SAP transaction code you steer to.

72. How do you test an SAP Fiori app?

Often HTML/browser engine, not classic SAP GUI.

73. What is a Tosca license type?

Commander, execution-only, etc. - follow what the project bought.

74. What is a subset?

An export of part of the repo to share.

75. How do you avoid merge conflicts?

Small check-outs, folders by team, frequent check-in.

76. What is a checkout?

Lock objects so you can edit in multi-user.

77. What is a check-in?

Save objects back to the common repo.

78. What happens if you lose a checkout?

Admin recover or take ownership per process.

79. What is a branch in Tosca?

Versioning approach depends on repo type and version.

80. How do you review a test case?

Peer review modules, data, and verifies, not only a green run.

81. What is a smoke execution list?

A short list that proves the app starts and login works.

82. What is a regression pack?

The suite you run before a release.

83. How do you select tests for a change?

Impact on modules used by the changed screens.

84. What is a data-driven test?

Same steps, many TCD instances.

85. What is a keyword-driven test?

JobKit - Tosca / SAP automation interview questions

Reusable business steps; Tosca libraries play that role.

86. Tosca vs Selenium?

Tosca is model-based commercial; Selenium is code-first OSS.

87. When is Tosca a poor fit?

Tiny apps, heavy CAPTCHA, or teams that only want code.

88. What is a TestCase workstate?

Status such as COMPLETED used in some processes.

89. What is a log in Tosca?

Run log with passed/failed steps and screenshots if configured.

90. How do you capture a screenshot on fail?

Execution settings for screenshots.

91. What is a recovery scenario example?

Close a leftover dialog so the next case can start.

92. How do you skip a step?

Condition or disable the step; do not leave broken verifies.

93. What is a condition in Tosca?

If-then style control of whether steps run.

94. What is a repetition?

Loop a folder while a condition holds.

95. How do you loop a table?

Repetition with Constraint moving through rows.

96. What is a buffer overwrite risk?

Two tests share a buffer name and leak data.

97. How do you isolate buffers?

Unique names per test or clear them in cleanup.

98. What is a test configuration 'Standard'?

Default config used if none is specified.

99. How do you handle 2FA in tests?

Test hooks or a non-prod OTP process. Never bypass production 2FA.

100. Should you automate production?

Prefer test environments; production automation is rare and gated.

101. What is a service virtualization?

Fake a dependency; Tosca may call a stub instead of a live API.

102. What is a contract test?

API schema and status checks between services.

103. How do you version modules?

Change with the app; keep old tests green or retire them.

104. What is technical debt in Tosca?

Duplicate modules, absolute waits, and unused instances.

105. How do you name modules?

Screen plus control group, stable and unique.

106. How do you name test cases?

Story or risk plus expected outcome.

JobKit - Tosca / SAP automation interview questions

107. What is a Definition of Done for a test?

Runs green twice on CI, reviewed, and data is documented.
